Medical Professionalism in the New Millennium: A Physician Charter

To our readers: I write briefly to introduce the Medical Professionalism Project and its principal product, the Charter on Medical Professionalism. The charter appears in print for the first time in this issue of *Annals* and simultaneously in *The Lancet*. I hope that we will look back upon its publication as a watershed event in medicine. Everyone who is involved with health care should read the charter and ponder its meaning.

The charter is the product of several years of work by leaders in the ABIM Foundation, the ACP–ASIM Foundation, and the European Federation of Internal Medicine. The charter consists of a brief introduction and rationale, three principles, and 10 commitments. The introduction contains the following premise: Changes in the health care delivery systems in countries throughout the industrialized world threaten the values of professionalism. The document conveys this message with chilling brevity.

The authors apparently feel no need to defend this premise, perhaps because they believe that it is a universally held truth. The authors go further, stating that the conditions of medical practice are tempting physicians to abandon their commitment to the primacy of patient welfare. These are very strong words. Whether they are strictly true for the profession as a whole is almost beside the point. Each physician must decide if the circumstances of practice are threatening his or her adherence to the values that the medical profession has held dear for many millennia.

Three Fundamental Principles set the stage for the heart of the charter, a set of commitments. One of the three principles, the principle of primacy of patient welfare, dates from ancient times. Another, the principle of patient autonomy, has a more recent history. Only in the later part of the past century have people begun to view the physician as an advisor, often one of many, to an autonomous patient. According to this view, the center of patient care is not in the physician’s office or the hospital. It is where people live their lives, in the home and the workplace. There, patients make the daily choices that determine their health. The principle of social justice is the last of the three principles. It calls upon the profession to promote a fair distribution of health care resources.

There is reason to expect that physicians from every point on the globe will read the charter. Does this document represent the traditions of medicine in cultures other than those in the West, where the authors of the charter have practiced medicine? We hope that readers everywhere will engage in dialogue about the charter, and we offer our pages as a place for that dialogue to take place. If the traditions of medical practice throughout the world are not congruent with one another, at least we may make progress toward understanding how physicians in different cultures understand their commitments to patients and the public.

Many physicians will recognize in the principles and commitments of the charter the ethical underpinning of their professional relationships, individually with their patients and collectively with the public. For them, the challenge will be to live by these precepts and to resist efforts to impose a corporate mentality on a profession of service to others. Forces that are largely beyond our control have brought us to circumstances that require a restatement of professional responsibility. The responsibility for acting on these principles and commitments lies squarely on our shoulders.

—Harold C. Sox, MD, Editor

Physicians today are experiencing frustration as changes in the health care delivery systems in virtually all industrialized countries threaten the very nature and values of medical professionalism. Meetings among the European Federation of Internal Medicine, the American College of Physicians–American Society of Internal Medicine (ACP–ASIM), and the American Board of Internal Medicine (ABIM) have confirmed that physician views on professionalism are similar in quite diverse systems of health care delivery. We share the view that medicine’s commitment to the patient is being challenged by external forces of change within our societies.

Recently, voices from many countries have begun calling for a renewed sense of professionalism, one that

*This charter was written by the members of the Medical Professionalism Project: ABIM Foundation: Troy Brennan, MD, JD (Project Chair), Brigham and Women’s Hospital, Boston, Massachusetts; Linda Blank (Project Staff), ABIM Foundation, Philadelphia, Pennsylvania; Jordan Cohen, MD, Association of American Medical Colleges, Washington, DC; Harry Kimball, MD, American Board of Internal Medicine, Philadelphia, Pennsylvania; and Neil Smelser, PhD, University of California, Berkeley, California. ACP–ASIM Foundation: Robert Copeland, MD, Southern Cardiopulmonary Associates, LaGrange, Georgia; Risa Lavizzo-Mourey, MD, MBA, Robert Wood Johnson Foundation, Princeton, New Jersey; and Walter McDonald, MD, American College of Physicians–American Society of Internal Medicine, Philadelphia, Pennsylvania. European Federation of Internal Medicine: Gunilla Brenning, MD, University Hospital, Uppsala, Sweden; Christopher Davidson, MD, FRCP, FESC, Royal Sussex County Hospital, Brighton, United Kingdom; Philippe Jaeger, MB, MD, Centre Hospitalier Universitaire Vaudois, Lausanne, Switzerland; Alberto Malliani, MD, Università di Milano, Milan, Italy; Hein Muller, MD, PhD, Ziekenhuis Goos-Noord, Rijksstraatweg, the Netherlands; Daniel Sereni, MD, Hôpital Saint-Louis, Paris, France; and Eugene Sutorius, JD, Faculteit der Rechts Geleerdheid, Amsterdam, the Netherlands. Special Consultants: Richard Cruess, MD, and Sylvia Cruess, MD, McGill University, Montreal, Canada; and Jaime Merino, MD, Universidad Miguel Hernández, San Juan de Alicante, Spain.
is activist in reforming health care systems. Responding
to this challenge, the European Federation of Internal
Medicine, the ACP–ASIM Foundation, and the ABIM
Foundation combined efforts to launch the Medical
Professionalism Project (www.professionalism.org) in
late 1999. These three organizations designated mem-
bers to develop a “charter” to encompass a set of prin-
ciples to which all medical professionals can and should
aspire. The charter supports physicians’ efforts to ensure
that the health care systems and the physicians working
within them remain committed both to patient welfare
and to the basic tenets of social justice. Moreover, the
charter is intended to be applicable to different cultures
and political systems.

PREAMBLE

Professionalism is the basis of medicine’s contract with
society. It demands placing the interests of patients above
those of the physician, setting and maintaining stan-
dards of competence and integrity, and providing expert
advice to society on matters of health. The principles
and responsibilities of medical professionalism must be
clearly understood by both the profession and society.
Essential to this contract is public trust in physicians,
which depends on the integrity of both individual phy-
sicians and the whole profession.

At present, the medical profession is confronted by
an explosion of technology, changing market forces,
problems in health care delivery, bioterrorism, and glob-
alization. As a result, physicians find it increasingly
difficult to meet their responsibilities to patients and soci-
ety. In these circumstances, reaffirming the fundamental
and universal principles and values of medical profes-
sionalism, which remain ideals to be pursued by all phy-
sicians, becomes all the more important.

The medical profession everywhere is embedded in
diverse cultures and national traditions, but its members
share the role of healer, which has roots extending back
to Hippocrates. Indeed, the medical profession must
contend with complicated political, legal, and market
forces. Moreover, there are wide variations in medical
delivery and practice through which any general prin-
ciples may be expressed in both complex and subtle ways.
Despite these differences, common themes emerge and
form the basis of this charter in the form of three fund-
amental principles and as a set of definitive professional
responsibilities.

FUNDAMENTAL PRINCIPLES

Principle of primacy of patient welfare. This principle
is based on a dedication to serving the interest of the
patient. Altruism contributes to the trust that is central
to the physician–patient relationship. Market forces, so-
cietal pressures, and administrative exigencies must not
compromise this principle.

Principle of patient autonomy. Physicians must have
respect for patient autonomy. Physicians must be honest
with their patients and empower them to make in-
formed decisions about their treatment. Patients’ deci-
sions about their care must be paramount, as long as
those decisions are in keeping with ethical practice and
do not lead to demands for inappropriate care.

Principle of social justice. The medical profession must
promote justice in the health care system, including the
fair distribution of health care resources. Physicians should
work actively to eliminate discrimination in health care,
whether based on race, gender, socioeconomic status,
ethnicity, religion, or any other social category.

A SET OF PROFESSIONAL RESPONSIBILITIES

Commitment to professional competence. Physicians
must be committed to lifelong learning and be respon-
sible for maintaining the medical knowledge and clinical
and team skills necessary for the provision of quality
care. More broadly, the profession as a whole must strive
to see that all of its members are competent and must
ensure that appropriate mechanisms are available for
physicians to accomplish this goal.

Commitment to honesty with patients. Physicians
must ensure that patients are completely and honestly
informed before the patient has consented to treatment
and after treatment has occurred. This expectation does
not mean that patients should be involved in every
minute decision about medical care; rather, they must
be empowered to decide on the course of therapy. Phy-
sicians should also acknowledge that in health care,
medical errors that injure patients do sometimes occur.
Whenever patients are injured as a consequence of med-
cal care, patients should be informed promptly because
failure to do so seriously compromises patient and soci-
etal trust. Reporting and analyzing medical mistakes
provide the basis for appropriate prevention and im-
Commitment to patient confidentiality. Earning the trust and confidence of patients requires that appropriate confidentiality safeguards be applied to disclosure of patient information. This commitment extends to discussions with persons acting on a patient’s behalf when obtaining the patient’s own consent is not feasible. Fulfilling the commitment to confidentiality is more pressing now than ever before, given the widespread use of electronic information systems for compiling patient data and an increasing availability of genetic information. Physicians recognize, however, that their commitment to patient confidentiality must occasionally yield to overriding considerations in the public interest (for example, when patients endanger others).

Commitment to maintaining appropriate relations with patients. Given the inherent vulnerability and dependency of patients, certain relationships between physicians and patients must be avoided. In particular, physicians should never exploit patients for any sexual advantage, personal financial gain, or other private purpose.

Commitment to improving quality of care. Physicians must be dedicated to continuous improvement in the quality of health care. This commitment entails not only maintaining clinical competence but also working collaboratively with other professionals to reduce medical error, increase patient safety, minimize overuse of health care resources, and optimize the outcomes of care. Physicians must actively participate in the development of better measures of quality of care and the application of quality measures to assess routinely the performance of all individuals, institutions, and systems responsible for health care delivery. Physicians, both individually and through their professional associations, must take responsibility for assisting in the creation and implementation of mechanisms designed to encourage continuous improvement in the quality of care.

Commitment to improving access to care. Medical professionalism demands that the objective of all health care systems be the availability of a uniform and adequate standard of care. Physicians must individually and collectively strive to reduce barriers to equitable health care. Within each system, the physician should work to eliminate barriers to access based on education, laws, finances, geography, and social discrimination. A commitment to equity entails the promotion of public health and preventive medicine, as well as public advocacy on the part of each physician, without concern for the self-interest of the physician or the profession.

Commitment to a just distribution of finite resources. While meeting the needs of individual patients, physicians are required to provide health care that is based on the wise and cost-effective management of limited clinical resources. They should be committed to working with other physicians, hospitals, and payers to develop guidelines for cost-effective care. The physician’s professional responsibility for appropriate allocation of resources requires scrupulous avoidance of superfluous tests and procedures. The provision of unnecessary services not only exposes one’s patients to avoidable harm and expense but also diminishes the resources available for others.

Commitment to scientific knowledge. Much of medicine’s contract with society is based on the integrity and appropriate use of scientific knowledge and technology. Physicians have a duty to uphold scientific standards, to promote research, and to create new knowledge and ensure its appropriate use. The profession is responsible for the integrity of this knowledge, which is based on scientific evidence and physician experience.

Commitment to maintaining trust by managing conflicts of interest. Medical professionals and their organizations have many opportunities to compromise their professional responsibilities by pursuing private gain or personal advantage. Such compromises are especially threatening in the pursuit of personal or organizational interactions with for-profit industries, including medical equipment manufacturers, insurance companies, and pharmaceutical firms. Physicians have an obligation to recognize, disclose to the general public, and deal with conflicts of interest that arise in the course of their professional duties and activities. Relationships between industry and opinion leaders should be disclosed, especially when the latter determine the criteria for conducting and reporting clinical trials, writing editorials or therapeutic guidelines, or serving as editors of scientific journals.
Commitment to professional responsibilities. As members of a profession, physicians are expected to work collaboratively to maximize patient care, be respectful of one another, and participate in the processes of self-regulation, including remediation and discipline of members who have failed to meet professional standards. The profession should also define and organize the educational and standard-setting process for current and future members. Physicians have both individual and collective obligations to participate in these processes. These obligations include engaging in internal assessment and accepting external scrutiny of all aspects of their professional performance.

SUMMARY

The practice of medicine in the modern era is beset with unprecedented challenges in virtually all cultures and societies. These challenges center on increasing disparities among the legitimate needs of patients, the available resources to meet those needs, the increasing dependence on market forces to transform health care systems, and the temptation for physicians to forsake their traditional commitment to the primacy of patients’ interests. To maintain the fidelity of medicine’s social contract during this turbulent time, we believe that physicians must reaffirm their active dedication to the principles of professionalism, which entails not only their personal commitment to the welfare of their patients but also collective efforts to improve the health care system for the welfare of society. This Charter on Medical Professionalism is intended to encourage such dedication and to promote an action agenda for the profession of medicine that is universal in scope and purpose.
